

ABSTRACT OF THE DISCLOSURE

Apparatus for regulating a driver, such as a single-shaft gas turbine, driving a gas  
5 compressor, such as a refrigerant compressor in a baseload LNG plant. The  
compressor has a gas inlet and a gas outlet and includes: a recycle pressure relief  
device in fluid communication with the gas outlet, the recycle pressure relief device  
adapted to receive a stream of a compressed gas having a discharge pressure from the  
gas outlet; and a conduit in fluid communication with the gas inlet, whereby the gas inlet  
10 receives at least a portion of the stream of the compressed gas transmitted to the  
conduit from the recycle pressure relief device when the discharge pressure reaches a  
designated pressure.
